

### What Is Measuring Up?

easuring Up is a series of biennial report cards that provide the general public and policymakers with information to assess and improve higher education in each state. The report cards evaluate states because they are primarily responsible for educational access and quality in the United States. This year's edition, *Measuring Up 2008*, is the fifth in the series, which began in 2000. In *Measuring Up*, "higher education" refers to all education and training beyond high school, including public and private, two- and four-year, and for-profit and nonprofit institutions.

The report card grades states in six overall performance categories:

**Preparation:** How adequately does the state prepare students for education and training beyond high school?

**Participation:** Do state residents have sufficient opportunities to enroll in education and training beyond high school?

**Affordability:** How affordable is higher education for students and their families?

**Completion:** Do students make progress toward and complete their certificates or degrees in a timely manner?

**Benefits:** What benefits does the state receive from having a highly educated population?

**Learning:** What is known about student learning as a result of education and training beyond high school?

Each state receives a letter grade in each performance category. Each grade is based on the state's performance on several indicators, or quantitative measures, in that category.

In four of the performance categories — Preparation, Participation, Completion, and Benefits grades are calculated by comparing each state's current performance with that of the best-performing states. This comparison provides a benchmark for evaluating each state's performance within a national context and encourages each state to "measure up" to the highest-performing states. The Affordability category is the exception. In this category, the state's current performance is compared with the performance of the best states in the late 1990s, since current performance reflects a trend to "measure down" rather than "measure up." All but one state receive an "F" in Affordability. The failing grades in this category confirm the fast decline in affordable higher education for American families. Despite state and federal increases in student financial aid, the overall portion of income that most families must devote for higher education continues to escalate.

In *Measuring Up 2008*, state performance in higher education is assessed in three ways:

**Graded Information:** Each state's current performance is compared with that of the best-performing states, and the results are indicated by letter grades.

Change Over Time: Change Over Time indicators compare each state's current performance with its own previous performance in the 1990s. For each category, the state's change is determined by its improvement or decline in performance on a key indicator in that category. This information is displayed in two ways. First, states receive either an "up" or a "down" arrow in each performance area (see page 3). An "up" arrow indicates that the state has increased or remained stable on the key indicator in the category, a "down" arrow indicates that the state has declined on the key indicator in the category. Secondly, information about Change Over Time is presented graphically in greater detail on the fourth page of this report card.

**International Comparisons:** As in 2006, this year's edition of *Measuring Up* offers international comparisons that reveal how well the United States and each of the 50 states are preparing residents with the knowledge and skills necessary to compete in a global economy. State performance is compared with the performance of nations that are associated with the Organisation for Economic Co-operation and Development (OECD).

In *Measuring Up 2008*, all states receive an "Incomplete" in Learning because there are not sufficient data to allow meaningful state-by-state comparisons. *Measuring Up 2006* provided state-specific information on Learning for nine states, but in 2008 no state collects and provides the information necessary to determine the state's "educational capital" — or the level of knowledge and skills possessed by its residents.

### A Snapshot of Grades and Change Over Time

#### **Preparation:**

**Grades:** 6 states received an A, 18 states received a B, 21 states received a C, 5 states received a D, and no state received an F.

Change Over Time:\* 34 states have improved or remained stable on the key indicator and 16 states have declined on the key indicator.

#### **Participation:**

**Grades:** 2 states received an A, 8 states received a B, 22 states received a C, 15 states received a D, and 3 states received an F.

Change Over Time: \* 43 states have improved or remained stable on the key indicator and 7 states have declined on the key indicator.

#### Affordability:

**Grades:** 1 state received a C and 49 states received an F.

Change Over Time:\* 2 states have improved or remained stable on the key indicator and 48 states have declined on the key indicator.

### **Completion:**

Grades: 11 states received an A, 20 states received a B, 16 states received a C, 1 state received a D, and 2 states received an F.

Change Over Time:\* 48 states have improved or remained stable on the key indicator and 2 states have declined on the key indicator.

#### **Benefits:**

**Grades:** 5 states received an A, 15 states received a B, 19 states received a C, 10 states received a D, and 1 state received an F.

Change Over Time: \* 50 states have improved or remained stable on the key indicator.

\*For the key indicators for Change Over Time, please see the five indicators with asterisks on page 4.

## New Mexico

### **PREPARATION**

2008 Grade

Change Over Time

New Mexico's underperformance in educating its young population could limit the state's access to a competitive workforce and weaken the state's economy.

- Eighth graders perform very poorly in math, science, reading, and writing.
- New Mexico is among the poorest-performing states in high school completion. Eighty percent of Hispanics have a high school credential, compared with 92% of whites.

### **PARTICIPATION**

2008 Grade

Change Over Time

New Mexico does fairly well in providing college opportunities for its residents.

- The likelihood of enrolling in college by age 19 is only fair, but a very high percentage of workingage adults are enrolled in higher education.
- Twenty-nine percent of Hispanic young adults are enrolled in college, compared with 40% of whites.

### REPORT CARD

<b>Preparation</b>	D-
Participation	B-
Affordability	F
Completion	D+
Benefits	C+
Learning	

### **AFFORDABILITY**

2008 Grade

Change Over Time

Higher education has become less affordable for students and their families.

- Poor and working-class families must devote 28% of their income, even after aid, to pay for costs at two-year colleges.
- Financial aid to low-income students is low. For every dollar in Pell Grant aid to students, the state spends only 20 cents.

### **BENEFITS**

2008 Grade

Change Over Time

A fairly small proportion of residents have a bachelor's degree, and the economic benefits to the state as a result are only fair.

- Thirteen percent of Hispanics have a bachelor's degree, compared with 40% of whites—one of the largest gaps in the nation.
- If all racial/ethnic groups had the same educational attainment and earnings as whites, total annual personal income in the state would be about \$7 billion higher.

### COMPLETION

2008 Grade

Change Over Time

New Mexico performs poorly in awarding certificates and degrees, but the state has improved over the decade.

- Only 42% of college students complete a bachelor's degree within six years.
- Thirty-eight percent of Hispanics graduate within six years, compared with 47% of whites.

### **LEARNING**

Like all states, New Mexico receives an "Incomplete" in Learning because there is not sufficient data to allow meaningful state-by-state comparisons.

### WHAT DO THE ARROWS MEAN?

State has increased or remained stable on the key indicator in the category.

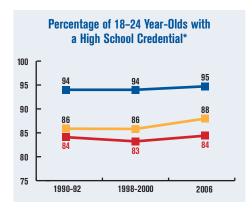

State has declined on the key indicator in the category.

### **CHANGE OVER TIME:** KEY INDICATORS

This page reflects New Mexico's performance and progress since the early 1990s on several key indicators.

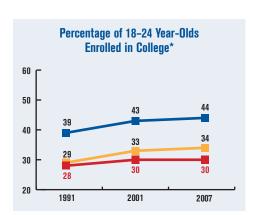

### **PREPARATION**

The percentage of young adults in New Mexico who earn a high school diploma has remained stable since the early 1990s. High school completion is well below the U.S. average and the top-performing states.

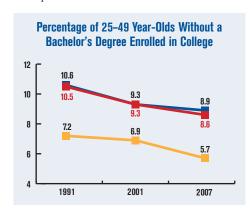

### **PARTICIPATION**

College enrollment of young adults in New Mexico has improved slightly since the early 1990s. Compared with the national average and the top states, however, considerably fewer young adults are enrolled in New Mexico (in percentages).

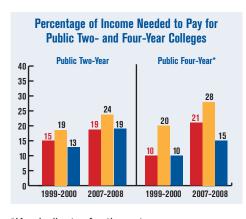

# The enrollment of working-age adults, relative to the number of residents without a bachelor's degree, has declined in New Mexico—as it has nationally and in the best-performing states. The percentage attending college in New Mexico is higher than the U.S. average but slightly below the top states.

### **AFFORDABILITY**

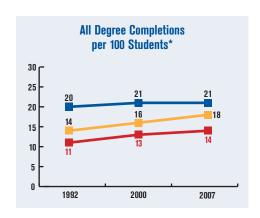

The share of family income, even after financial aid, needed to pay for college has risen substantially. To attend public two- and four-year colleges in New Mexico, students and families pay less than the U.S. average but more than those in the best-performing states.

<sup>\*</sup>Key indicator for the category.

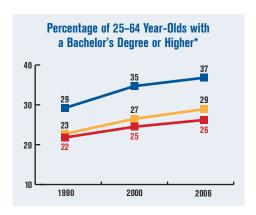

### COMPLETION

The number of undergraduate credentials and degrees awarded in New Mexico, relative to the number of students enrolled, has increased since the early 1990s. However, New Mexico is considerably below the U.S. average and the top states on this measure.

### **BENEFITS**

The percentage of residents who have a bachelor's degree has increased in New Mexico, but is below the U.S. average and well below the top states.

### **PREPARATION**

### New Mexico 2008

New Mexico's underperformance in educating its young population could limit the state's access to a competitive workforce and weaken the state's economy.

#### **Graded Information**

#### Compared with other states:

- Eighty-four percent of young adults in New Mexico earn a high school diploma or General Education Development (GED) diploma by age 24, placing New Mexico among the poorestperforming states on this measure.
- Very small proportions of high school students in New Mexico are enrolled in upper-level math (37%) and upper-level science (22%), placing New Mexico among the lowest-performing states on both measures.
- A small proportion (29%) of 8th graders take algebra.
- Eighth graders perform very poorly on national assessments in math, science, reading, and writing, indicating that they are not well prepared to succeed in challenging high school courses. New Mexico is among the lowestperforming states on all four measures.
- Low-income 8th graders perform very poorly on national assessments in math, placing New Mexico among the lowestperforming states on this measure.
- Very small proportions of 11th and 12th graders score well on Advanced Placement tests and college entrance exams.
- Fifty-eight percent of secondary school students are taught by qualified teachers, which compares fairly poorly with topperforming states.

PREPARATION	New Mex	Тор	
PREPARATION	Early 1990s*	2008	States
High School Completion (25%)			
18- to 24-year-olds with a high school credential	84%	84%	95%
K-12 Course Taking (30%)			
9th to 12th graders taking at least one upper-level math course	33%	37%	64%
9th to 12th graders taking at least one upper-level science course	18%	22%	46%
8th grade students taking algebra	n/a	29%	47%
K-12 Student Achievement (35%)			
8th graders scoring at or above "proficient" on the national assessment exam in math	11%	17%	41%
8th graders scoring at or above "proficient" on the national assessment exam in reading	24%	17%	39%
8th graders scoring at or above "proficient" on the national assessment exam in science	19%	18%	41%
8th graders scoring at or above "proficient" on the national assessment exam in writing	18%	17%	46%
Low-income 8th graders scoring at or above "proficient" on the national assessment exam in math	7%	9%	24%
Number of scores in the top 20% nationally on SAT/ACT college entrance exam per 1,000 high school graduates	122	156	265
Number of scores that are 3 or higher on an Advanced Placement subject test per 1,000 high school juniors and seniors	44	91	237
Teacher Quality (10%)			
7th to 12th graders taught by teachers with a major in their subject	n/a	58%	83%

<sup>\*</sup>The indicators report data beginning in the early 1990s or the closest year for which reliable data are available. See the Technical Guide for Measuring Up 2008.

### **Performance Gaps**

■ There is a 12% gap between whites and all minorities in the percentage of 18- to 24-year-olds with a high school credential. Among the same population, 80% of Hispanics and 78% of Native Americans, the largest minority populations in New Mexico, have a high school credential, compared with 92% of whites.

### Change in Graded Measures

■ The percentage of 8th graders performing well on national assessments in reading has decreased substantially over the past decade, showing one of the steepest declines in the nation on this measure.

■ During the same period, New Mexico is one of only two states to decline in the percentage of 8th graders performing well on national assessments in writing.

#### Other Key Facts

- Among working-age adults (ages 25 to 49) without a high school diploma, only nine out of 1,000 earned a
- About 25% of children under age 18 live in poverty, compared with a national rate of 18%.

The preparation category measures how well a state's K-12 schools prepare students for education and training beyond high school. The opportunities that residents have to enroll in and benefit from higher education depend heavily on the performance of their state's K-12 educational system.

### **PARTICIPATION**

### New Mexico 2008

New Mexico does fairly well in providing college opportunities for its residents.

#### **Graded Information**

#### Compared with other states:

- The chance of New Mexico high school students enrolling in college by age 19 is only fair, primarily because the proportion of students who graduate from high school within four years is small. The proportion of students graduating from high school within four years is one of the smallest in the country.
- However, a very high percentage of working-age adults (ages 25 to 49) are enrolled in college-level education or training.

### **Performance Gaps**

■ There is a 10% gap between whites and all minorities in the percentage of 18- to 24-year-olds enrolled in college. The gap between whites and Native Americans is 13%, and the gap between whites and Hispanics is 11%.

PARTICIPATION	New Me	Тор	
	Early 1990s*	2008	States
Young Adults (67%)			
Chance for college by age 19	34%	44%	57%
18- to 24-year-olds enrolled in college	28%	30%	44%
Working-Age Adults (33%)			
25- to 49-year-olds enrolled in any type of postsecondary education with no bachelor's degree or higher	10.5%	8.6%	8.9%

<sup>\*</sup>The indicators report data beginning in the early 1990s or the closest year for which reliable data are available. See the Technical Guide for Measuring Up 2008.

### Change in Graded Measures

■ Since the early 1990s, the chance of enrolling in college by age 19 has increased by 28%, compared with a nationwide increase of 8%. Although a smaller percentage of students graduate from high school in four years, more of those who graduate enroll in college.

### **Other Key Facts**

- New Mexico's population is projected to grow by 11% from 2005 to 2025, below the national increase of 18%. During approximately the same period, the number of high school graduates is projected to increase by 5%.
- About 19% of the adult population has less than a high school diploma or its equivalent, compared with 16% nationwide.
- In New Mexico, 1,177 more students are leaving the state than entering to attend college. About 22% of New Mexico high school graduates who go to college attend college out of state.

The participation category addresses the opportunities for state residents to enroll in higher education. A strong grade in participation generally indicates that state residents have high individual expectations for education and that the state provides enough spaces and types of educational programs for its residents.

### **AFFORDABILITY**

### New Mexico 2008

Higher education has become less affordable for students and their families.

#### **Graded Information**

- Compared with best-performing states, families in New Mexico devote a large share of family income, even after financial aid, to attend public two-year colleges, and they devote a very large share of family income to attend public four-year colleges and universities in the state. These two sectors enroll 93% of college students in New Mexico.
- The state's investment in needbased financial aid is very low when compared with topperforming states, and New Mexico does not offer low-priced college opportunities.
- Undergraduate students borrowed on average \$5,201 in 2007, one of the highest averages in the nation.

### **Change in Graded Measures**

■ Since the late 1990s, the share of family income, even after financial aid, needed to pay for college expenses at public four-year institutions has increased from 10% to 21%.

### **Other Key Facts**

■ In New Mexico, 56% of students are enrolled in community colleges and 37% in public fouryear colleges and universities.

	New Me	Top States	
AFFORDABILITY	Previous Years*	Current Year	in Previous Years
Family Ability to Pay (50%)	2000	2008	
Percent of income (average of all income groups) needed to pay for college expenses minus financial aid:			
at community colleges	15%	19%	13%
at public 4-year colleges/universities	10%	21%	10%
at private 4-year colleges/universities	84%	110%	30%
Strategies for Affordability (40%)	1993	2008	
State investment in need-based financial aid as compared to the federal investment	16%	20%	89%
At lowest-priced colleges, the share of income that the poorest families need to pay for tuition	10%	14%	7%
Reliance on Loans (10%)	1995	2008	
Average loan amount that undergraduate students borrow each year	\$2,595	\$5,201	\$2,619

<sup>\*</sup>See the Technical Guide for Measuring Up 2008.

Note: In the affordability category, the lower the figures, the better the performance for all indicators except for "State investment in need-based financial aid."

The affordability category measures whether students and families can afford to pay for higher education, given income levels, financial aid, and the types of colleges and universities in the state.

### **AFFORDABILITY**

### New Mexico 2008

### Financial Burden to Pay for College Varies Widely by Family Income

Those who are striving to reach or stay in the middle class — the 40% of the population with the lowest incomes — earn on average \$15,186.

■ If a student from such a family were to attend a community college in the state, their net cost to attend college would represent about 28% of their income annually.

Tuition, room, and board:	\$7,858
Financial aid received:	-\$3,587
Net college cost:	\$4,270
Percent of income:	28%

■ If the same student were to attend a public four-year college in the state, their net cost to attend college would represent about 30% of their income annually.

Tuition, room, and board:	\$10,677
Financial aid received:	-\$6,151
Net college cost:	\$4,525
Percent of income:	30%

Note: The numbers shown for tuition, room, and board, minus financial aid may not exactly equal net college cost due to rounding.

A CLOSER LOOK		Community Colleges		Public 4-Year colleges/universities		Private Non-Profit 4-Year colleges/universities	
AT FAMILY ABILITY TO PAY	Median Family Income	Net college cost*	Percent of income needed to pay net college cost	Net college cost*	Percent of income needed to pay net college cost	Net college cost*	Percent of income needed to pay net college cost
Income groups used to calculate 2008 family ability to pay							
20% of the population with the lowest income	\$9,257	\$2,948	32	\$2,860	31	\$27,159	293
20% of the population with lower-middle income	\$22,639	\$5,868	26	\$6,026	27	\$26,014	115
20% of the population with middle income	\$38,235	\$7,099	19	\$8,612	23	\$26,304	69
20% of the population with upper-middle income	\$59,969	\$7,464	12	\$8,902	15	\$26,729	45
20% of the population with the highest income	\$106,858	\$7,599	7	\$9,261	9	\$28,335	27
40% of the population with the lowest income	\$15,186	\$4,270	28	\$4,525	30	\$26,616	175

<sup>\*</sup>Net college cost equals tuition, room, and board, minus financial aid.

### COMPLETION

### New Mexico 2008

New Mexico performs poorly in awarding certificates and degrees, but the state has improved over the decade.

#### **Graded Information**

#### Compared with other states:

- Only a fair percentage (50%) of first-year students in community colleges return for their second year.
- At four-year colleges and universities, a high percentage (69%) of freshmen return for their sophomore year.
- However, New Mexico is among the lowest-performing states in the percentage (42%) of firsttime, full-time college students who complete a bachelor's degree within six years of entering college.
- In addition, a small proportion of students complete certificates and degrees relative to the number enrolled, placing New Mexico among the lowest-performing states on this measure.
- Twenty-five postsecondary certificates and degrees were awarded for every 1,000 people in the state without a college degree.

COMPLETION	New Me	Тор	
COMPLETION	Early 1990s*	2008	States
Persistence (20%)**			
1st year community college students returning their second year	64%	50%	66%
Freshmen at 4-year colleges/universities returning their sophomore year	n/a	69%	82%
Completion (80%)			
First-time, full-time students completing a bachelor's degree within 6 years of college entrance	35%	42%	65%
Certificates, degrees, diplomas at all colleges & universities per 100 undergraduate students	11	14	21
Certificates, degrees, diplomas at all colleges & universities per 1,000 adults with no college degree	19	25	44

<sup>\*</sup>The indicators report data beginning in the early 1990s or the closest year for which reliable data are available.

### **Performance Gaps**

- There is a 9% gap between whites and other racial/ethnic groups in college graduation rates at four-year institutions. Thirty-eight percent of Hispanics and 25% of Native Americans graduate from a four-year institution within six years, compared with 47% of whites.
- Among white students, 15 degrees are awarded for every 100 students. In contrast, among other racial/ethnic groups, 13 degrees are awarded for every 100 students. The rate of awards for both Hispanics and Native Americans is 13 for every 100 undergraduate enrollments.

### **Change in Graded Measures**

- Over the past decade the percentage of first-time, full-time college students earning a bachelor's degree within six years of enrolling in college has increased by 21%. Nonetheless, New Mexico's current performance on this measure remains low when compared with other states.
- Since the early 1990s, New Mexico has seen an increase in the proportion of students who complete certificates and degrees relative to the number enrolled.
- During the same period, New Mexico has also seen an increase in the number of certificates and degrees completed relative to the population with no college degree. Nevertheless, the state's current performance on this measure remains very low when compared with other states.

The completion category addresses whether students continue through their educational programs and earn certificates or degrees in a timely manner. Certificates and degrees from one- and two-year programs as well as the bachelor's degree are included.

<sup>\*\*2008</sup> data may not be comparable with data from previous years. See the Technical Guide for Measuring Up 2008.

### **BENEFITS**

### New Mexico 2008

A fairly small proportion of residents have a bachelor's degree, and the economic benefits to the state as a result are only fair.

#### **Graded Information**

#### Compared with other states:

- A fairly small proportion of residents have a bachelor's degree, and the economic benefits to the state as a result are only fair.
- However, residents contribute substantially to the civic good, as measured by charitable giving and voting.

### **Performance Gaps**

- There is a 26% gap between whites and other racial/ethnic groups in the percentage of 25- to 64-year-olds with a bachelor's degree or higher, which is the largest gap in the United States. Among the same population, 13% of Hispanics and 10% of Native Americans in New Mexico have a bachelor's degree or higher, compared with 40% of whites.
- If all racial/ethnic groups had the same educational attainment and earnings as whites, total annual personal income in the state would be about \$7 billion higher.

BENEFITS	New Me	Ton States	
DENEFITS	Early 1990s*	2008	Top States
Educational Achievement (38%)			
Adults (ages 25 to 64) with an associate's degree or higher	27%	34%	44%
Adults (ages 25 to 64) with a bachelor's degree or higher	22%	26%	37%
Economic Benefits (31%)			
Increase in total personal income as a result of the percentage of population with some college (including an associate's degree), but not a bachelor's degree	2%	2%	3%
Increase in total personal income as a result of the percentage of population holding a bachelor's degree	8%	8%	11%
Civic Benefits (31%)			
Residents voting in national elections	54%	56%	65%
Of those who itemize on federal income taxes, the percentage declaring charitable gifts	86%	82%	90%
Increase in volunteering as a result of college education	18%	15%	20%
Adult Skill Levels (0%)**			
Quantitative Literacy	n/a	n/a	n/a
Prose Literacy	n/a	n/a	n/a
Document Literacy	n/a	n/a	n/a

<sup>\*</sup>The indicators report data beginning in the early 1990s or the closest year for which reliable data are available. See the Technical Guide for Measuring Up 2008.

### **Change in Graded Measures**

#### Since the early 1990s:

- The percentage of residents holding a bachelor's degree has increased by 20%, compared with an increase of 28% for the United States overall.
- The percentage of New Mexico residents who vote has increased slightly, in contrast to a nationwide decrease of 4%.

### **Other Key Facts**

- In 2007, New Mexico scored 54 on the New Economy Index, compared with a nationwide score of 62. The New Economy Index, created by the Kauffman Foundation, measures the extent to which a state is participating in knowledge-based industries. A higher score means increased participation.
- Policymakers and state residents do not have access to important information about high-level literacy skills because the state has declined to participate in the national literacy survey.

The benefits category measures the economic and societal benefits that the state receives as a result of having well-educated residents.

<sup>\*\*</sup>State-level estimates on these measures are not currently available except for six states participating in an oversample; NCES intends to release limited 50-state data on this 2003 survey in 2009.

### New Mexico 2008

Like all states, New Mexico receives an "Incomplete" in Learning because there is not sufficient data to allow meaningful state-by-state comparisons.

Measuring Up 2004 for the first time provided state-level results in Learning because five states (Illinois, Kentucky, Nevada, Oklahoma, and South Carolina) participated in a groundbreaking effort to pilot comparable measures in this category. The National Forum on College-Level Learning conducted this project, which was funded by the Pew Charitable Trusts.1 These results were also included in Measuring Up 2006, which for the first time reported performance measures based on licensure and graduate admissions examination scores for all 50 states.

The approach used to examine Learning employed a method similar to that of the other five performance categories in *Measuring Up*. Indicators were developed in three categories:

- 1. Literacy Levels of College-Educated Residents. What are the abilities of the state's collegeeducated population? The answer to this question constitutes the "educational capital" that the state can count on with respect to developing a twenty-first century workforce and a citizenry equipped to function effectively in civic and democratic processes.
- 2. Graduates Ready for Advanced Practice. To what extent do colleges and universities in the state educate students to be capable of contributing to the workforce? The answer to this question depends a great deal on the extent to which graduates of the state's colleges and universities are ready to enter a licensed profession or participate in graduate study.
- **3. Performance of College Graduates.** How effectively can the state's college and university

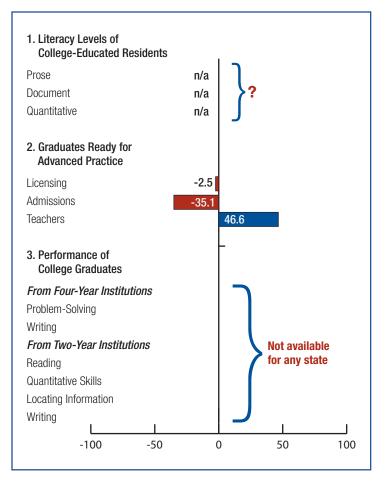

graduates communicate and solve problems? This is the bottom line with respect to performance in learning that can only be determined by common direct assessments of college graduates.

To evaluate state performance on Learning in *Measuring Up 2004*, indicator results within each of these three categories were compiled for the pilot states and compared with a common standard: the national average on each measure. Performance on the resulting group of measures created a "learning profile" for

each state that shows how many percentage points above or below this national level the values of each of the state's indicators fall.

Measuring Up 2008 uses the same method for portraying results in Learning, although the picture is incomplete. Results for Literacy Levels of College-Educated Residents can be calculated only for the six states (Kentucky, Maryland, Massachusetts, Missouri, New York, and Oklahoma) that participated in the State Assessment of Adult Literacy (SAAL)-a state-level version of the

National Assessment of Adult Literacy (NAAL) conducted in 2003. Results for Graduates Ready for Advanced Practice, which are based on common licensure and graduate admissions examinations. can be calculated for all 50 states. Results for Performance of College Graduates relied upon specially administered standardized assessments given to representative samples of the state's about-tograduate college students for five states in 2004. These measures were reported in Measuring Up 2004 and Measuring Up 2006, but have not been repeated for 2008.

#### **New Mexico Results**

New Mexico is just below the national benchmark in workforce preparation as reflected in professional licensure examinations. About the same proportion of the state's graduates take such examinations as do graduates on average nationwide, and their pass rates match the national average. New Mexico is 35 percentage points below the national benchmark in preparing students for graduate study as reflected in graduate admissions examinations. Sixteen percent fewer of the state's graduates take such examinations than do graduates on average nationwide, and the proportion earning competitive scores is 22% below the national average. Finally, New Mexico is more than 46 percentage points above the national benchmark with respect to pass rates on teacher examinations.

New Mexico did not participate in the SAAL, so no results on literacy are available.

1. A full report on the results of this project can be obtained from the National Center at http://www.highereducation.org/reports/mu\_learning/index.shtml.

### **How New Mexico Measures Up Internationally**

### **Participation**

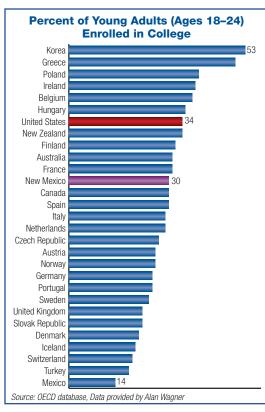

About 30% of young adults, ages 18 to 24, in New Mexico are currently enrolled in college. When compared internationally, New Mexico's enrollment rate is 23% less than the rate in Korea, the topperforming nation on this measure. New Mexico is also surpassed by Greece, Poland, Ireland, Belgium, Hungary, New Zealand, Finland, Australia, and France.

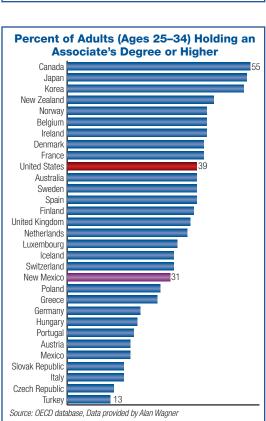

### Completion

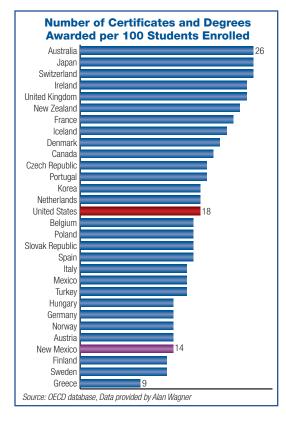

When compared internationally, New Mexico ranks very low in the number of certificates or degrees produced relative to the number of students enrolled. With 14 out of 100 students completing certificates or degrees, New Mexico's completion rate is only 53% of the rate in Australia, the topperforming nation on this measure, where 26 out of 100 students complete certificates or degrees. Finland, Sweden, and Greece are the only countries behind New Mexico on this measure.

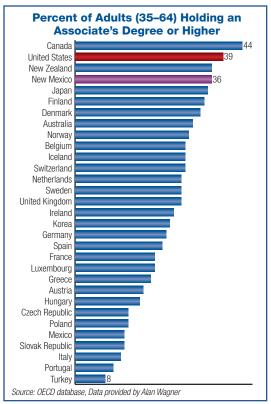

### Educational Level of Adult Population

New Mexico's younger adults, ages 25 to 34, are falling behind older adults, ages 35 to 64, in attaining a college degree. When compared internationally, the proportion of younger adults with a college degree in New Mexico is 24% less than the proportion in Canada, the topperforming nation on this measure. New Mexico is also surpassed by Japan, Korea, New Zealand, Norway, Belgium, Ireland, Denmark, France, Australia, Sweden, Spain, Finland, the United Kingdom, the Netherlands, Luxembourg, Iceland, and Switzerland.

### **Additional Information**

### New Mexico **2008**

State Context	New Mexico	State Ran
Population (2007)	1,969,915	36
Gross State Product (2007, in millions)	\$76,178	37
Leading Indicators	New Mexico	U.S.
Projected % change in population, 2005-2025	11%	18%
Projected % change in number of all high school graduates, 2005-2022	5%	9%
Projected budget surplus/shortfall by 2013	-6%	-6%
Median income of poorest 20% of population (2006)	\$9,257	\$11,169
Children in poverty (2006)	25%	18%
Percent of adult population with less than a high school diploma or equivalent (2006)	19%	16%
GEDs awarded to 25- to 49-year-olds with no high school diploma (2006)	9	8
New Economy Index (2007)*	54	62
	New N	lexico
Facts and Figures	Number/Amount	Percent
Institutions of Postsecondary Education (2007-08)		
Public 4-Year	8	19%
Public 2-Year	20	48%
Private 4-Year	13	31%
Private 2-Year	1	2%
Students Enrolled by Institution Type (2006)		
Public 4-Year	42,999	37%
Public 2-Year	64,802	56%
Private 4-Year	7,547	7%
Private 2-Year	527	0%
Students Enrolled by Level (2006)		
Undergraduate	115,875	88%
Graduate	14,944	11%
Professional	1,009	1%
Enrollment Status of Students (2006)		
Full-time	68,837	52%
Part-time Part-time	62,991	48%
Net Migration of Students (2006)		
Positive numbers for net migration mean that more students are entering than leaving the state to attend college. Negative numbers reveal the reverse.	-1,177	
Average Tuition (2007-08)		
Public 4-year institutions	\$4,135	
Public 2-year institutions	\$1,316	
Private 4-year institutions	\$28,256	
State and Local Appropriations for Higher Education		
Per \$1,000 of personal income, FY 2008	\$16	
Per capita, FY 2008	\$488	
% change, FY 1998-2008		98%

<sup>\*</sup>The New Economy Index, created by the Kauffman Foundation, measures the extent to which a state is participating in knowledge-based industries. A higher score means increased participation.

### Questions and Answers about Measuring Up 2008

### Who is being graded in this report card, and why?

Measuring Up 2008 grades states, not students or individual colleges or universities, on their performance in higher education. The states are responsible for preparing students for higher education by means of sound K-12 school systems, and they provide most of the public financial support — approximately \$77 billion in 2008 — for colleges and universities. Through their oversight of public institutions of higher education, state leaders affect the types and number of education programs available in the state. State leaders also determine the limits of financial support and often influence tuition and fees for public colleges and universities. They also establish how much statebased financial aid is available to students and their families, which affects students attending both private and public colleges and universities. In addition, state economic development policies influence the income advantage that residents receive from having some college experience or a college degree.

### Q. How are states graded?

A. States receive letter grades in each performance category. Each category consists of several indicators, or quantitative measures — a total of 36 indicators in the five graded categories. Grades are calculated based on each state's current performance on these indicators, relative to the best-performing states. Grades in *Measuring Up 2008* reflect state performance for 2006 or 2007, the most recent information available.

For the sixth category, Learning, states receive an "Incomplete" because there is not sufficient information about student learning for meaningful state-by-state comparisons.

### What sources of information are used to determine the grades?

All data used to grade states in *Measuring Up 2008* were collected from reliable national sources, including the U.S. Census Bureau and the U.S. Department of Education. All data are the most recent public information available for state comparisons. Please see the *Technical Guide for Measuring Up 2008* for more information regarding data sources.

### Q. How do we measure Change Over Time?

Change Over Time indicators compare each state's current performance with its own previous performance in the 1990s. For each category, the state's change is determined by its improvement or decline in performance on a key indicator in that category. This information is displayed in two ways. First, states receive either an "up" or a "down" arrow in each performance area (see page 3). An "up" arrow indicates that the

state has increased or remained stable on the key indicator in the category, a "down" arrow indicates that the state has declined on the key indicator in the category. Secondly, information about Change Over Time is presented graphically in greater detail on the fourth page of this report card.

### Q. What is new in Measuring Up 2008?

This year the National Center replaced the data from the Census Bureau's Current Population Survey (CPS) with the American Community Survey (ACS), also administered by the Census Bureau. The ACS has a sample size of three million households (as of 2005), and will eventually replace the long survey form of the decennial census. Because of its large sample size, it is a valuable resource for state data. This new data source affects several indicators in the preparation, participation, completion, and benefits categories. For more information on these indicators, see *Technical Guide* for *Measuring Up 2008* at www.highereducation.org. In addition, *Measuring Up 2008* includes two new indicators, one in Completion and one in Benefits. These new indicators can be found in the *Technical Guide to Measuring Up 2008*.

### . What information is provided but not graded?

The state report cards highlight important gaps in college opportunities for various income and ethnic groups, they identify improvements and setbacks in each state's performance over time, and they compare state performance in higher education with other countries. Each state report card also presents important contextual information, such as demographic trends, student migration data, and state funding levels for higher education.

### Why does *Measuring Up 2008* include international indicators?

As in 2006, this year's edition of Measuring Up provides information on key international indicators of educational performance. In the global economy, it is critical for each nation to establish and maintain a competitive edge through the ongoing, high-quality education of its population. Measuring Up 2008 offers international comparisons that reveal how well the United States and each of the 50 states are preparing residents with the knowledge and skills necessary to compete in a global economy. As with other data in the report card, each international measure is based on the most current data available. In this case, the data are from the Organisation for Economic Co-operation and Development (OECD). International comparisons are used to gauge the states' and the nation's standing relative to OECD countries on the participation and educational success of their populations. Please see the Technical Guide for Measuring Up 2008 for more information regarding data sources.

### **Key Indicators** by Category:

**Preparation:** Percentage of 18- to 24-year-olds with a high school credential (1990 to 2006)

**Participation:** Percentage of 18- to 24-year-olds enrolled in higher education (1991 to 2007)

Affordability: Percentage of income (average of all income groups) needed to pay for college expenses at public four-year institutions (1999-2007)

**Completion:** All degree completions per 100 students (1992 to 2007)

**Benefits:** Percentage of 25- to 64-year-olds with a bachelor's degree or higher (1990 to 2006)

THE NATIONAL CENTER FOR PUBLIC POLICY AND HIGHER EDUCATION

The *Measuring Up 2008* national and state report cards on higher education were made possible by grants from the Bill and Melinda Gates Foundation and the Lumina Foundation for Education.

The National Center for Public Policy and Higher Education promotes public policies that enhance Americans' opportunities to pursue and achieve high-qual-

ity education and training beyond high school. Established in 1998 by a consortium of national foundations, the National Center is an independent, nonprofit, nonpartisan organization that is not affiliated with any institution of higher education or government agency. It conducts research and analyses of policy issues facing the states and the nation with a particular focus on opportunity and achievement in higher education — including two- and four-year, public and private, for-profit and nonprofit institutions. The National Center communicates findings and recommendations, including information on state and national performance of American higher education, to the public, to civic, business, and higher education leaders, and to state and federal policymakers.

The National Center is solely responsible for Measuring Up 2008.

For further information about the National Center and its publications, visit www.highereducation.org.

152 North Third Street, Suite 705, San Jose, California 95112 Telephone: 408-271-2699, FAX: 408-271-2697
